

Pavankumar Gali

galipavan06@gmail.com | linkedin.com/in/pavankumar-gali | github.com/Douqt

Education

University of Houston

BS Honors Computer Science | Minor Finance & Math

Graduation: May 2027

GPA: 3.938, Major GPA: 4.0

- Coursework: Computer Org & Architecture, Data Structures & Algorithms, Discrete Math, Linear Algebra

Experience

Research Chair, IEEE NSM | University of Houston

Feb 2025 – Present

- Organizing research colloquiums with 6+ graduate/PhD students, founding our research division and captivating students.
- Planning undergraduate research opportunities by matching students with professors based on their needs.
- Preparing to mentor students in research fundamentals, from literature reviews to best practices in publication.

Computer Science Tutor, Cougar CS | University of Houston

Feb 2025 – Present

- Tutoring 30+ students in Computer Architecture and Data Structures, improving class average scores by 15% based on exam performance.
- Created 10+ visual aids and code templates for challenging concepts (e.g., cache mapping, graph traversals, ARM assembly pipelining).
- Earned Top 10 tutor designation by completing 15+ hours in first 8 weeks, ranking among most active tutors.

Vision Systems Lead, Golden Warriors Robotics (FIRST Robotics Competition)

Aug 2023 – May 2024

- Led development of a real-time object detection system using Java and PhotonVision, achieving 97.5% accuracy in competition environments.
- Applied vision fundamentals (grayscale conversion, adaptive thresholding, contour analysis) to improve detection reliability.
- Trained 5 junior members in computer vision fundamentals, with 3 continuing with similar competitions.

Projects

Goob Fitness App | JavaScript, Node.js, Express, MongoDB

github.com/Douqt/GoobFit

- Used Express.js and MongoDB to create user authentication, posts, and comments with JWT and bcrypt.
- Implemented MongoDB database integration, optimizing queries and ensuring efficient data retrieval.

Chess AI | C#, .NET, Unity

github.com/Douqt/Chess-AI

- Developed competitive chess AI rated 1600 ELO on Lichess, outperforming 65% of human players.
- Engineered a competitive Chess AI implementing advanced algorithms (alpha-beta pruning, mini-max, Zobrist hashing, move ordering, iterative deepening) achieving 12-ply search depth.
- Optimized performance using bitboard representations and transposition tables, improving move calculation time by 100x (2000ms → 20ms).

B.O.B. (Battle of Businesses) | C#, .NET, Unity

github.com/Douqt/BOB

- Earned 5th place among 50+ Texas teams, qualifying FBLA Nationals with my business simulation game.
- Designed complete Unity / C# systems including a branching narrative engine (15+ decision paths), intricate demonstration of stock market mechanics, and competitive standard user interface.

DAAS MCC (Minecraft Server) | Minecraft, Java, Git

- Managed a 25-person team across building, art, coding, and social media to run a popular Minecraft server.
- Led a 5-person development team to design engaging game experiences and optimize performance.
- Organized weekly tournaments for 200+ active players, fostering a strong community.

Skills

- **Languages:** C#, C++, Java, JavaScript, TypeScript, HTML & CSS, R
- **Tools/Frameworks:** .NET, Git, Unity, React, Node.js, Express, MongoDB
